

POCKETSMART AI

Your Smart Budget & Recommendation Assistant

Document	01 – Brainstorming and Ideation
Project	PocketSmart AI
Prepared By	Ratchana M
Phase	Phase 1

1. Problem Identified

Many users find it difficult to plan their spending for different personal needs such as **home interiors, parties, and jewelry purchases**. Users may have a fixed budget but may not know how to divide the budget, what categories or items to consider, how to prioritize their requirements, or where to search for suitable products.

Therefore, a simple application is needed to provide **budget-based planning and recommendations**.

2. Existing Problems / Limitations

- Budget planning is often done manually.
- Users may not know how much to allocate for each category.
- Comparing different requirements can be time-consuming.
- Recommendations may not be personalized to the user's budget and preferences.
- Previous planning details may not be stored systematically.
- Users may need to search multiple platforms separately for relevant products.

3. Proposed Project Idea

PocketSmart AI – Your Smart Budget & Recommendation Assistant is a web-based application that helps users create **budget-based plans and recommendations**.

The application allows users to select different planners such as:

- Home Planner
- Party Planner
- Jewelry Planner

Users enter their budget and preferences. The system processes the information and generates practical recommendations. The application can also use **Gemini AI** to generate recommendations when the AI service is configured.

4. Main Objective

The main objective of PocketSmart AI is to provide users with a **simple and practical budget planning assistant** that helps them:

- Plan their expenses.
- Allocate their budget effectively.
- Identify suitable categories/items.
- Receive personalized recommendations.
- Save and view previous recommendations.
- Find relevant shopping search links.

5. Initial Feature Ideas

Area	Initial Features
User Management	User registration, user login, user logout, and session-based authentication.
Planning Features	Home planning, Party planning, Jewelry planning, and budget-based input.
Recommendation Features	AI-based recommendation, rule-based fallback recommendation, budget allocation, and suggested categories/items.
Additional Features	Shopping search links, recommendation history, database storage, and a simple web interface.

6. Target Users

- Students and young users managing personal budgets.
- People planning home interiors.
- People organizing parties or events.
- People looking for jewelry within a fixed budget.
- Users who want simple budget-based recommendations.

7. Rough Workflow

Step	Workflow
1	User
2	Register / Login
3	Dashboard
4	Select Planner – Home / Party / Jewelry
5	Enter Budget & Preferences
6	Input Validation
7	Generate Recommendation
8	Gemini AI / Fallback Recommendation

Step	Workflow
9	Display Recommendation
10	Shopping Search Links
11	Save Recommendation
12	View History

Phase 1 Conclusion

PocketSmart AI was proposed as a practical solution for **budget planning and personalized recommendations**. The initial brainstorming focused on combining budget management, planning features, recommendation generation, and history management into one simple web application.
